

11th ICMM International Course on Health Support in Saharan Environment

Tozeur : November 06-10, 2023

Scientific Content

The course organizing committee has chosen this year to continue developing the scientific content and devoted more time and space to practical and field activities. The scientific program includes 2 parts:

I- Theoretical training covering specialized modules:

- *A module related to the water management in Saharan environment and to some emerging or environmental diseases as waterborne or vector-borne diseases as well as lung diseases due to desert environment.*
- *A module related to the acclimatization and heat regulation.*
- *A Module will be dedicated to scorpion and ophidian envenomation.*

II- Practical field training including:

- *Health support operation in Saharan environment and an operational training.*
- *A workshop in order to guarantee a better immersion of the participants in the Saharan area, and comprising practical gestures relating surviving in such area.*

Conferences will be presented in both languages French or English and with simultaneously translated.
